

**Thirty 37th Meeting of the
Informal South Pacific ATS Co-ordinating Group
(ISPACG/37)**

State Civil Aviation Service in French Polynesia (SEAC-PF)
International Airport, Fa'a'a, French Polynesia
April 27, 2023

Agenda Item 2.1: ANSP Updates

DGAC Chile Facility Update

Presented by **DGAC Chile**

Current Status:

The implementation of the new version of the TOPSKY system from THALES LAS France, acquired in 2019, was implemented in March 2023 in the Oceanic Control Center. This upgrade means data link and AIDC capabilities under the ICD 3.0 ASIA PAC standard.

AIDC tests were performed with Lima Control Center to verify the operation. Also, ADS-C/CPDLC tests were done with aircraft in flight. All these tests were successful.

In a short period, we expect to coordinate with Auckland and Tahiti ACC to schedule the pre-operational tests and link Santiago Oceanic ACC via AIDC with ASIA PAC ACCs.

Also, negotiations have started for the contracting of SB ADS-B service. It was requested to initiate the arrangements that will lead to hiring the service, so it is hoped that by the end of this year it would already be implemented.
